SUMMARY

I came to engineering from health science, and for two years I've built multi-tier, database-driven web applications that trading operations teams at Barclays depend on every day. I work across the full stack, from Java and .NET services and SQL to Angular and React interfaces, and I learn unfamiliar systems quickly and leave them better than I found them.

PROFESSIONAL EXPERIENCE

BARCLAYS Hybrid
Equities & Derivatives Developer *May 2025 - Present*

- Build full-stack web applications (Angular/TypeScript front ends, C#/.NET RESTful APIs) that trading operations teams use to book and manage trades, including bulk submission handling 600,000+ trades per request
- Moved into full-stack work and began developing Java backend services on the Structured Products team, strengthening validation rules to reject trades booked under trader IDs with an incorrect role
- Partnered with a globally distributed team to bring Dividend Swaps onto the trading platform, owning the bulk entry, quick entry, and trade detail features from requirements gathering and solution design through delivery
- Modernized 4 applications and their API layer onto .NET 8 and Angular 17, and wrote automated end-to-end Playwright tests that validated critical workflows through the migration
- Review code across a globally distributed team, giving feedback on design, readability, and consistency with team standards
- Use AI coding tools (Claude Code, GitLab Duo) to speed up development, and integrated an OpenAI model into a live feature

GENESIS10 Remote
Software Engineer (Consultant) *Jun 2024 - Present*

- Completed a competitive Java full-stack training program (top 5% acceptance) covering Java, Spring Boot, SQL, Python, Docker and containerization, and test-driven development (TDD); contracted to Barclays upon completion

PROJECTS

READING GUILD | *Java 21*, *Spring Boot 3*, *React Native*, *TypeScript*, *PostgreSQL*, *Spring Data JPA*, *Flyway*, *AWS S3*

- Designed, shipped, and actively maintain a full-stack social reading platform live on the App Store and Google Play, with real-time chat over WebSockets, push notifications, and role-based permissions
- Built a layered Java 21 backend and RESTful APIs in Spring Boot, secured with Spring Security and JWT, with 523 JUnit and Mockito tests run in GitHub Actions CI before every deploy
- Designed the relational PostgreSQL schema with Flyway migrations and wrote SQL queries, including tsvector full-text search

EDUCATION & TRAINING

AWS CERTIFIED CLOUD PRACTITIONER **2026**

BRAINSTATION Miami, FL
Diploma in Software Engineering *2023*

- Selected as a Teaching Assistant from a class of 27; mentored new developers in Node.js, MySQL, and React and reviewed and debugged 100+ distinct student projects

FLORIDA ATLANTIC UNIVERSITY Boca Raton, FL
Bachelor of Science in Health Science *2017 - 2021*

- Graduated Summa Cum Laude · GPA 3.9/4.0 · Multiple merit-based scholarships

AWARDS

- 2nd place ($5,000), Build Day X Hackathon (BrainStation x Tech Equity Collective, a Google initiative), for an AI-powered vehicle maintenance app built in 24 hours; 1st place in two BrainStation hackathons

SKILLS

Languages: Java (21), TypeScript, JavaScript, SQL, C#, Python, Bash, HTML, CSS
Backend & APIs: Spring Boot, Spring Data JPA, RESTful APIs, Spring Security, JWT, OAuth, WebSockets, Maven, .NET 8, Node.js
Frontend: React, React Native, Angular, Expo
Databases: PostgreSQL, MySQL, Flyway migrations, MongoDB
Testing: JUnit, Mockito, Playwright (end-to-end), Jest, test-driven development (TDD)
Cloud & Tools: AWS (S3, Lambda, EventBridge, SQS, DynamoDB, EC2, RDS), Git, GitLab, GitHub Actions, CI/CD, Agile, Jira
AI Development: AI-assisted coding tools (Claude Code, GitLab Duo, Kiro), OpenAI API integration
